Tech Leader · Senior Level 3 (L8) · Sitecore

Location: To be confirmed

A Tech Leader who joins, already in flight, the migration of a global commercial real estate services company from on-premises Sitecore to Sitecore XM Cloud with Next.js, and leads the team's technical delivery alongside the client's own strong technology team.

Must have

- [ ] 7+ years of experience in software development
- [ ] Has led a project's technical delivery end to end, managing the Developers
- [ ] Has joined a project already in flight as Tech Lead and taken over its technical delivery
- [ ] Has led delivery for a demanding client with a strong in-house technology team, holding technical positions with the client's engineers
- [ ] Experience with Sitecore XM Cloud
- [ ] Experience with Sitecore Headless (JSS / Headless SXA) and Next.js
- [ ] Hands-on technical expertise and project solution design
- [ ] Code review and mentoring of the Developers on the team
- [ ] Client communication and scope management
- [ ] English B2 or higher

Nice to have

- Familiarity with on-premises Sitecore, the migration's source platform

What the person will do

- Take over the technical delivery of the project in flight: lead its day-to-day technical execution and make its project-level technical and design decisions
- Lead the migration from on-premises Sitecore to Sitecore XM Cloud with a headless Next.js front end
- Ensure deliverables meet timelines, quality and the defined standards
- Guide, review and unblock the Developers, and mentor them as part of the role
- Coordinate with the PM and the client's technology team on scope, estimates and risks
- Apply architecture standards, and escalate gaps and risks
- Set the team's branching and release strategy
- Scope and sequence the remaining work, riskiest first
- Report to executives on value, risks and decisions, and manage the stakeholders
- Answer for the team's delivery KPIs: propose their targets and review them monthly with the team
- Optimize the performance of the existing application through improvements to its architecture, code or integrations
- Keep the technical documentation up to date, including architecture diagrams, processes and key components

Screening

1. "Tell me about the last Sitecore XM Cloud project you worked on with a headless front end. What was your role, and what did you design?" A good answer mentions XM Cloud, JSS or Headless SXA with Next.js, hands-on work on the solution, and decisions the candidate made.
2. "Tell me about a time you joined a project already in progress as Tech Lead. What did you do in your first weeks?" A good answer mentions how they learned the codebase and the delivery state, took ownership of delivery, and earned the team's trust.
3. "Describe a technical disagreement with a client's own engineering team. How did you handle it?" A good answer mentions holding a position with technical arguments, laying out options, reaching an agreement and keeping the relationship working.
4. "How do you run code review and mentoring for the Developers on your team, and how do you handle scope changes the client asks for?" A good answer mentions a regular review practice, concrete mentoring, and negotiating scope with the client explicitly.
5. Check in the CV or profile: 7+ years in software development, at least one Tech Lead role managing Developers, and Sitecore XM Cloud and headless (JSS / Headless SXA, Next.js) projects.
6. Check in the CV or profile: on-premises Sitecore projects, which are a plus.
7. Check English at B2 or higher with recruiting's usual test.

Not a fit if

- Has fewer than 7 years of experience in software development.
- Has worked as a senior individual contributor but never led a team's technical delivery.
- Has only led projects from their start, never taken over one already in flight.
- Has only led delivery where the client had no technology team of its own to answer to.
- Has no hands-on experience with Sitecore XM Cloud.
- Has Sitecore experience without headless (JSS / Headless SXA) and Next.js.
- Is no longer hands-on: cannot design the solution or work in the code.
- Has never reviewed code or mentored Developers.
- Has never dealt directly with a client on communication and scope.
- English below B2.
